

Current release: 4.1.1

Ultimate Boot CD is completely free for the download, or could be obtained for a small fee. If you had somehow paid a ridiculous amount of money for it, you have most likely been fleeced. The least you could do is to make as many copies of the official UBCD and pass it to your friends, relatives, colleagues or even complete strangers to minimize the per unit cost of your loss!

****If you live on the cutting edge, a [beta version](#) of UBCD V5.0 is now available for testing.***

****For those of you interested in a Windows version of the Ultimate Boot CD, you might want to check out [this project](#) initiated by Ben Burrows.***

****Please note that some of the freeware on UBCD explicitly prohibits redistribution for commercial purposes eg. DIMM_ID. If you intend to resell UBCD for commercial gains, please contact the respective authors for their permission.***

You need the Ultimate Boot CD if you want to:

- **Run floppy-based diagnostic tools from CDROM drives.** More and more PCs are shipped without floppy drives these days, and it is such a royal pain when you need to run diagnostic tools on them.

- **Free yourself from the slow loading speed of the floppy drive.**

Even if you do have a floppy drive, it is still much much faster to run your diagnostic tools from the CDROM drive, rather than wait for the tool to load from the floppy drive.

- **Consolidate as many diagnostic tools as possible into one bootable CD.**

Wouldn't you like to avoid digging into the dusty box to look for the right floppy disk, but simply run them all from a single CD? Then the Ultimate Boot CD is for you!

- **New! Run Ultimate Boot CD from your USB memory stick.**

A script on the CD prepares your USB memory stick so that it can be used on newer machines that supports booting from USB devices. You can access the same tools as you would from the CD version.

When you boot up from the CD, a text-based menu will be displayed, and you will be able to select the tool you want to run. The selected tool actually boots off a virtual floppy disk created in memory.

Tools currently included in the Ultimate Boot CD are:

Name of Tool	Version	Notes
CPU Tests		
CPU Burn-in	1.00	<i>The Linux vers</i>
Mersenne Prime Test	23.5.2	<i>Need</i>
StressCPU	24-Oct-05	<input type="checkbox"/>
